

PDE4445

MSc. Robotics Project

2025 – 2026

Tentative Schedule

Introductory Sessions: Biweekly (until July 11, 2026)

Individual meetings with supervisor: Recommended weekly

Cross–Campus Guest Lecture Sessions: September 2026

Supervision

You are assigned a supervisor, who will follow your progress and guide you through the development of your project.

The supervisor will also mark your project (with exception of the peer presentation).

You are expected to meet your supervisor regularly.

Evaluation

Item	Value	Deadline	Description
Project blog	40%	July 17, 2026	Online blog with weekly updates and multimedia content
Project report	40%	September 25, 2026	Project written report, in the form of a research article of about 8 pages.
Final presentation	20%	October 2026	Oral presentation with supervisor and second marker.

The Blog

Continuous, up-to-date documentation of project progress and development, using a mix of writing and multimedia resources.

The blog starts with project goals and description of detailed planning, including Gantt Chart. It will include an updated literature review and links to appropriate references and resources. It will explain the project state, including prototypes, tests, achievements.

The Blog

Progress needs to be constantly documented through pictures, videos and text. Update at least weekly.

The blog will be regularly checked by supervisor. At project conclusion must include a high-quality video of the final project outcome.

Things to Remember

Define partial goals.

Make sure that your project can succeed even if you don't get to finish everything. Don't try to go for something ambitious without partial, more achievable goals.

Focus your efforts.

Don't try to develop a full final commercial or industrial product. Think carefully and work on small important ideas, specific aspects worth studying and developing.

**Make sure to focus on
Robotics.**

Things to Remember

- **Analyse, simulate.**

Don't dive headfirst into building or programming, analyse the subject and the problem, and plan carefully. Use simulations as extensively as possible.

- **Personal contribution.**

You can find almost everything online. It's ok to look for good resources, but always think about what your personal contribution to make your project unique.
