

Science and Technology

Department of Computer Engineering and Informatics

Robotics Dissertation Project

PDE4445

Module Coordinator: Sameer Kishore

Term: Term III (2025/26)

Duration of the module: 12 weeks

Document version: 1.0 – 04/2026

Online Location of Handbook

This handbook can also be accessed via My Learning.

Other formats available

This handbook is available in a large print format for students with any disability. If you would like a large print copy or have other requirements for the handbook, please contact CampusCentral via our AskMDX service:

<https://askmdx.mdx.ac.ae/>

We can supply sections from this publication as:

- a Word document with enlarged type sent by email
- printed copy with enlarged type
- printed copy on non-white paper

Other formats may be possible. We will do our best to respond promptly. To help us, please be as specific as you can about the information you require and include details of your disability.

Disclaimer

The material in this handbook is as accurate as possible at the date of production. You will be notified of any minor changes promptly. If there are any major changes to the module, you will be consulted prior to the changes being confirmed. Please check the version number on the front page of this handbook to ensure that you are using the most accurate information.

Other documents

Your module handbook should be read and used alongside your programme handbook and the information available to all students on MyLearning and MyMDX, including the Academic Regulations. Your programme handbook can be found on the My Learning programme page for your course. The Dubai Campus Guide can be found at <https://www.mdx.ac.ae/life-at-university/campus-guide>

1 Module Introduction

The MSc Robotics Dissertation aims to give students the opportunity to navigate the entire lifecycle of a research project, commencing with the proposal stage and progressing through rigorous research, implementation, and evaluation phases. Throughout the module, students will undertake an independent project, working closely with their supervisor to explore a specific area of robotics in depth, including, but not limited to topics related to autonomous systems, human-robot interaction, or machine learning algorithms. This module aims to cultivate your analytical and problem-solving skills, fostering innovation within the rapidly evolving domain of robotics. This experience equips students with vital project management abilities, enabling them to effectively plan, organize, and execute a complex undertaking within the field of robotics. By actively participating in this process, students will develop crucial skills in time management, resource allocation, data analysis, and problem-solving, all of which are integral to successful project completion.

2 The Module Team

Sameer Kishore		
	Role:	Module Coordinator
	Room:	VR Lab 1st Floor Block 16
	Email:	s.kishore@mdx.ac.ae
	Telephone:	+971 4 361 6246

Judhi Prasetyo		
	Role:	Supervisor
	Room:	Robotics Lab; 3rd Floor Block 16
	Email:	j.prasetyo@mdx.ac.ae
	Telephone:	

Maha Saadeh	
	Role:
	Supervisor

Telephone:	

3 Communication with the teaching team

You are welcome to reserve an appointment during my office hours for timings that might suit us both. Please email me your appointment request along with your inquiry from your university email account. Don't forget to state your student ID number and module code and name in your email/online booking request. If you turn up at the door unannounced or phone at an unsuitable time, then you are far less likely to make contact

I will send urgent and/or individual messages about the module to you by email and/or the Microsoft Teams platform, so it is important that you read your university email and check your MS Teams notifications regularly. I recommend that you check your email and MS Teams accounts at least three times a week. I will also use these accounts to tell you about events (guest lectures or academic enrichment sessions, for example) and career opportunities (employability workshops, internships, job offers and so on) that will help enhance your learning.

Use your Middlesex email address when contacting members of staff to avoid emails being caught in University spam filters. Please also always include your student number when contacting staff.

For all queries that don't relate to your programme of study (e.g. fees, wellbeing, accommodation, IT issues, etc.) you should directly contact ([Campus Central](#)) rather than your module tutors. This will help ensure you get a response more quickly. Check the Middlesex Dubai website, UniHub and MDX Central App regularly during term-time for any other notifications or announcements.

Respond to emails from staff within three working days (i.e. not including weekends, public holidays or University closure days) and allow staff the same period of time (three working days) to respond to your queries. Whilst staff may occasionally choose to respond to emails outside of normal working hours (Monday Friday, 9am 5pm), this should not be expected as standard. If you don't hear back from a member of staff within the three working days timeframe, then sending a reminder email is encouraged. You can also try raising the question with a different member of staff e.g. your Campus Programme Coordinator. You can find contact details for these members of staff within MDX Central App. If a staff member is away from work, they may have set up an 'out of office' automated email that will provide instructions of how you can get your query

answered in their absence so make sure that you carefully read any such messages.

Contact your Module Coordinator(s) and / or the Campus Programme Coordinator if you are absent for any period of time and cannot attend scheduled teaching.

4 Module Overview

Aims

The final individual Project module is designed to consolidate the knowledge and advanced skills gained in the preceding modules, and to provide students with the opportunity to develop and demonstrate mastery in undertaking advanced robotics projects in their future employment. The module aims to develop advanced skills and practical experience in planning, problem solving, and implementing robotics solutions and in making effective written and oral project presentations.

Learning Outcomes

On completion of this module the successful student will be able to:

1. Investigate and critically analyse a robotic problem, applying their knowledge to formulate plausible solutions.
2. Display knowledge and understanding of robotics concepts and methodologies, exercise significant judgement and personal initiative in the process of addressing the task to perform.
3. Produce a well-designed piece of robotic software and/or hardware, or a development of an existing piece of software and/or hardware, that is an effective solution to a given specification, problem or challenge.
4. Perform formal testing and critically evaluate the project outcome, in terms of performance, conformance to the specification and viability of the chosen technical solution.
5. Illustrate and present their project through a formal technical report and a live presentation, including all essential aspects of an academic publication.

Syllabus

Students will engage with this module mostly through the practical application of their specialised knowledge and skills, based on provided material about fundamental aspects of project development, and using university resources.

Contact time will include: project planning and management; academic writing and presenting; formal testing methods; guest lectures on robot state of the art development and current research efforts inside and outside the department and university.

Learning and Teaching Strategy

This module will give students the opportunity to undertake a research, design and development robotics project, which will involve the collection of primary data, analysis, design, planning and control, concluding with a presentation of their work.

Before the start of the module students will be presented with a list of projects suggested by tutors associated with the program. In consultation with their tutors, the student will choose a topic that they would like to pursue and will be assigned a member of staff as a supervisor.

The topics would generally be aligned to the tutor's research or personal interest so that they can provide specialist guidance. There will also be the opportunity for students to suggest their own ideas for projects, subject to approval and agreement of a tutor to act as a supervisor.

The student will be expected to meet with their supervisor at least once a week for the duration of the module, where they will report on their progress, receive formative feedback and set negotiated targets. Students are also expected to keep a blog describing their project goals and their progress, through multimedia resources.

In addition, the module offers weekly three hour sessions covering the basics of individual project development, with planning, testing, reporting, and other aspects. Contact time will include research seminars and guest lectures, covering recent advances and modern methods in robotics, also regarding ethical issues, and in relation to other disciplines (medicine, biology, psychology, material sciences, etc.). Staff will be encouraged to share their recent research and involve the students as possible, and external speakers may be invited too.

Assessment Scheme

Formative Assessment will consist in the regular following of project development, from problem definition and planning, to testing and final self-assessment. Work in this module will be mostly individual, but students will be able to receive feedback and advice at any point during project development. In particular, they will be assigned to a project supervisor particularly knowledgeable of the project subject.

Students will receive formative feedback, oral or written, on all blog updates and report drafts, plus on general progress and specific technical details. Comments will inform them about how well they are doing and specifically address areas for improvement towards the final submission and associated learning outcomes

Summative assessment will be based fully on coursework, and consists of three components:

Blog (40%) Online blog with weekly updates and multimedia content.

Report (40%) Project written report, in the form of a research article of about 8 pages.

Presentation (20%) Oral presentation with supervisor and second marker.

Learning hours

- *Total learning hours: 600*
- *Scheduled teaching: 5%*
- *Guided learning: 5%*
- *Independent study: 90%*

4.1 Research Ethics

The teaching, learning, assessment and research activities undertaken in this module have been considered and are not likely to require ethical approval.

However, please seek advice if undertaking the module entails carrying out any research activities involving **human participants, human data, animals/animal products, precious artefacts, materials or data systems or social media**. If you submit work that includes data gathered from or about people, this may be treated as academic misconduct and could lead to fail grade being awarded.

Research ethics approval seeks to ensure all research is designed and undertaken according to certain principles of ethical research. These include:

1. Primary concern must be given to the **safety, welfare and dignity** of participants, researchers, colleagues, the environment and the wider community
2. Consideration of **risks** should be undertaken before research commences with the aim of minimising risks to those involved i.e. human participants or animal subjects, colleagues, the environment and the wider community, as well as actual or potential risks to those directly or indirectly affected by the research.
3. **Informed consent** should be freely given by participants, and only by a trained person when collecting or analysing human tissue.
4. Respect for the **privacy, confidentiality and anonymity** of participants
5. Consideration of the rights of **people who may be vulnerable** (by virtue of perceived or actual differences in their age, social status, ethnic origin, gender, mental capacities, or other such characteristics) who may be less competent or able to refuse to give consent to participate
6. For participants below the age of 18, parental consent must be obtained prior to the study.

7. Researchers have a responsibility to the general public and to their profession; as such they should balance the anticipated benefits of their research against **potential harm, misuse or abuse** which must be avoided
8. Researchers must demonstrate the highest standards of **ethical conduct and research integrity**. They must work within the limits of their skills, training and experience, and refrain from exploitation, dishonesty, plagiarism, infringement of intellectual property rights and the fabrication of research results. They should declare any actual or potential conflicts of interest, and where necessary take steps to resolve them.
9. When using human tissues for research, the UK's Human Tissue Act and Human Tissue Authority (HTA) requirements must be met. Please contact the relevant designated person (DP) in your department or the HTA Designated Individual (DI).
10. Research should **not involve any illegal activity**, and researchers must comply with all relevant laws

You can apply for research ethical approval using the Middlesex University Dubai Ethics Form. The relevant forms, templates and guidance on the approval process can be obtained from the module folder on UniHub. Your module coordinator can provide further guidance. Additionally, documents can be found through the following link <https://bit.ly/35Zp7MZ>

5 Learning Resources

This module has a variety of learning resources available for you to use to support your learning. These include module notes, templates and guidelines, web links, examples of past works, reading materials. These can be accessed online via the module page. Please visit the module page regularly to make use of these.

6 Expectations of studying this module

6.1 Attendance and engagement

The University's formal regulations about attendance are located in (section C2 in the 'University Regulations' section available here: <https://www.mdx.ac.uk/about-us/policies>). The main points are:

You should attend and engage with all scheduled classes and prescribed activities. Studies have shown that a good student engagement has a positive impact on performance and therefore is an important factor in helping you to fulfil your academic potential. In addition, for those who are on student visas, Dubai's regulatory authorities require attendance to be monitored.

Your lecturers will maintain attendance records during scheduled teaching sessions using the MDX Dubai App. You are expected to follow any guidelines and instructions provided for proper recording of your attendance for your learning sessions.

The MDX Dubai App (available on iOS and Android) allows students to register their attendance at timetabled classes with a click of a button. All you need to do is:

1. Connect to the internet using the **#mdxDUBAI** Wi-Fi network
2. Open your MDX Dubai App
3. Log-in via your Campus User ID (M0xxxxxxx@studentmdx.ac) and password
4. Ensure that you have given permission to the MDX Dubai App to access your smartphone's location and camera settings
5. Find the correct module and timetabled class via the Calendar
6. When the tutor puts up the class QR code, use the scanner provided within the MDX App to scan the QR code.
7. You will get an automated notification onscreen within the App saying your attendance has been recorded

Middlesex University Dubai supports students, enabling them to achieve their full potential. We provide this support through a number of strategies, all of which provide our students with a supportive learning environment. Online support material on MyMDX is provided as a guide to the content of the class but is no substitute for interaction with your tutor and classmates. In accordance with University Regulation C2.1 for taught programmes of study, it is the responsibility of students to attend scheduled classes and prescribed activities for the modules on which they are registered.

Further information on engaging with your programme will be available at your Induction.

If you experience difficulties beyond your control, which prevents you from engaging with your module, you should notify your tutor and CampusCentral, who may be able to offer support and guidance.

6.2 Professional behaviour

The programme of study you are undertaking is underpinned by developing professional behaviour and attitude. You are expected to behave in a professional, supportive manner to your peers and teachers. The Student Code of Conduct and Discipline Rules are available here:

<https://www.mdx.ac.ae/about-us/university-regulations/student-conduct-and-discipline-rules>.

You must come to sessions prepared and ready to contribute where appropriate.

Please remember that when you are on campus, your University ID should be carried with you always and you must be able to identify yourself if asked to do so. You must also comply with community health precautions, and other health and safety protocols.

Please conduct your email communication with fellow students, tutors and all relevant staff in a formal and courteous manner.

Unacceptable Behaviours in Face-to-Face Interactions

- Aggressive or abusive behaviour, including shouting, bullying behaviour, physical violence, rudeness, and making threats, inappropriate gestures, or indecent comments
- Persistently interrupting or disrupting learning activities and events
- Engaging in antisocial behaviour that impacts others
- Making derogatory or discriminatory remarks about others
- Using offensive language or engaging in personal verbal attacks
- Discussing sensitive matters in public settings
- Making unsupported claims that the University or individual staff have committed criminal, corrupt, biased or perverse conduct without any evidence
- Demanding that staff set aside or make exceptions to University regulations
- Demanding responses within an unreasonable timescale or insisting on seeing specific staff members when not feasible
- Refusing to accept outcomes or solutions offered or repeatedly seeking further explanations without new information or evidence

Actions to be taken by the University or Staff

- Highlight the unacceptable behaviour(s) and explain why and what effect it is having
- Pause or end the discussion or interaction if the unacceptable behaviour remains persistent
- In serious cases, ask for removal of individuals from University facilities and report the incident to relevant Dubai authorities
- Restrict personal contact and require communication via email or written channels and/or through third parties
- Referral to appropriate disciplinary procedures

For more information, refer to the Middlesex University Dubai Regulations:

www.mdx.ac.ae/about-us/university-regulations/

6.3 Laptops, Mobile Phones and other devices

There are many advantages of using technology in higher education as long as we are able to address the associated challenges. You are encouraged to use your laptops, mobile phones, tablets and other communication devices as part of learning activities and for some sessions, your tutor may even require them. You must ensure that your devices do not disrupt your learning or that of other students or your tutors. Unless you are using technology together with your tutor as part of a learning activity, all mobile phones and other communication devices must be switched to airplane mode or put on silent settings. Calls, texts and social media activities should be avoided during the taught session unless agreed with the tutor before the start of the session. Disruptive use of devices during class can lead to students being asked to leave classes or other learning activities and face disciplinary action.

6.4 Recording of Lectures

As per section C16 of Middlesex University Regulations unauthorised audio recording, video recording or photography of lectures, or other forms of learning activities by students, is prohibited.

Limited recording by students may be permitted under exceptional circumstances only (for example, for an individual student as a “reasonable adjustment”, within the meaning of the UK’s Equalities Act), upon explicit permission provided by the tutor and, where appropriate, by everyone else involved. Permission for recording does not imply permission for publication (e.g. on Facebook, YouTube, or other Social Media), or distribution to others. Unauthorised recording of such activities violates the privacy of persons involved, may infringe on copyrights and intellectual property rights of others and can be intrusive and disruptive in a learning environment. In all cases, violation of this regulation will be managed under the student disciplinary procedures.

In addition to a violation of University Regulations, unauthorised recordings may expose students to other unintended consequences, as per UAE law. The United Arab Emirates has several laws (for example, Federal Law No. 5 of 2012 on Combatting Cybercrimes and its amendment by the Federal Law No. 12 of 2016) for the protection of privacy and reputation and defamation. Some of the acts that could amount to a criminal offence are:

- possessing on an electronic device a photo taken without the subject’s consent
- posting other people’s pictures or videos online or on social media (including WhatsApp) without their consent
- tagging a person without their consent
- threatening or insulting people online
- spreading information via social media, that is not verified by the official sources
- gossiping about people or maligning them.

Further guidance is available within the University Regulations and via the Quality Office (qualityoffice@mdx.ac.ae).

7 Academic Integrity and Misconduct

Academic misconduct is a breach of the values of academic integrity. It can occur when a student cheats in an assessment or attempts to deliberately mislead an examiner that the work presented is their own when it is not. Academic misconduct is a corrosive force in the university's academic life; it jeopardises the quality of education and devalues the degrees and qualifications of the University. It includes, but is not limited to, plagiarism, self-plagiarism, commissioning or buying work from a third party or copying the work of others, and breach of examination rules.

Students who attempt to gain an unfair advantage over others through academic misconduct will be penalised by sanctions according to the severity of the offence, which can include exclusion from the University. Taking unfair advantage over other students in assessment is considered a serious offence by the University. Action will be taken against any student who contravenes the regulations through negligence, foolishness or deliberate intent. Academic misconduct takes several forms, in particular:

Plagiarism using extensive unacknowledged quotations from, or direct copying of, another person's work and presenting it for assessment as if it were your own effort. This includes the use of third party essay writing services.

Collusion working with other students (without the tutor's permission) and presenting similar or identical work for assessment.

Infringement of Exam Room Rules Communication with another candidate, taking notes to your table in the exam room and/or referring to notes during the examination.

Self-Plagiarism including any material which is identical or substantially similar to material that has already been submitted by you for another assessment in the University or elsewhere.

Purchasing or Commissioning attempting to purchase or purchasing work for an assessment including, for example from the internet, or attempting to commission, or commissioning someone else to complete an assessment. Essay mills are now illegal entities, and use of them is facilitating an illegal activity.

Unauthorised use of Generative Artificial Intelligence (Gen AI) - You cannot use Generative AI tools in your assessments unless specified by the module leader. Where the use of Generative AI is allowed you must provide as a minimum

- Written acknowledgment of the use of generative artificial intelligence, the extent of use, and how generated materials were used.
- Descriptions of how the information was generated (including the prompts used).

Where generated material has not been adapted, citing and referencing using closest source types in the relevant referencing style (e.g. "artificial intelligence" or "non-

recoverable sources”). Appropriate use of Artificial Intelligence (AI) is detailed in the assessment requirements grid in the **Assessments** section.

Links to the relevant University Regulations and additional support resources can be found here:

Section F: Academic Integrity and Misconduct:

[University Regulations for Taught Programmes](#)

Referencing & Plagiarism: Suspected of plagiarism?:

<https://libguides.mdx.ac.uk/plagiarismreferencing/referencing>

Referencing and avoiding plagiarism:

<https://unihub.mdx.ac.uk/study/writing-numeracy/awl-resources/writing>

Student Success Essentials (an online self-study course available via MyLearning) includes useful information about how to approach your assessments and complete them with honesty. The course also describes what plagiarism (cheating) is and how to avoid it, so you don't face any disciplinary action. For successfully completing this course, you will be awarded Digital-Credentials and a certificate that will verify the knowledge you have gained. Digital-Credentials can be shared and promoted via LinkedIn and other digital channels.

[Access to course.](#) You will have to log into to MyUniHub and then MyLearning to access the course

Full details on academic integrity and misconduct and the support available can be found at Academic Integrity | UniHub (mdx.ac.uk) as well as on the Campus Guide at <https://www.mdx.ac.ae/life-at-university/campus-guide>

Our Library and Centre for Academic Success (CAS) runs workshops and clinics to help you learn how to avoid plagiarism and how to reference correctly. To get support and guidance on academic writing techniques that meet our expectations of Academic Integrity, please contact a staff member in the Centre for Academic Success (cas@mdx.ac.ae).

The Dubai Academic Integrity and Misconduct Team (aim@mdx.ac.ae) provide guidance on responding to allegations of academic misconduct and its related processes.

8 Micro-course: Foundations of AI Literacy

You should complete the micro-course on 'Foundations of AI Literacy' on MyLearning to empower yourself with the basic skills you will need to navigate the rapidly changing landscape of generative artificial intelligence. This micro course has lessons that will equip you with essential skills to understand AI, evaluate AI generated content to make informed judgement about tools you encounter and use AI responsibly as part of your student journey. This micro course can be completed within 90 minutes. You can expect to learn through:

- Completely free and accessible bite-sized content based on the latest guidelines from thought leaders at UNESCO, IBM, Google, OpenAI, and Anthropic
- Core AI literacy concepts written by leading academics and our information literacy experts in the library
- Progressing at your own pace using self-study materials and interactive content, including videos, case-studies, quizzes, and interactive activities
- Upon completing the micro-course, you will be awarded a certificate of completion.

What does this micro-course cover?

Unit 1. Understand: AI and ethical aspects: This unit introduces the fundamental differences between AI and Generative AI, emphasizing the role of data in AI applications. It also addresses key ethical concerns related to AI-generated content.

Unit 2. Evaluate: Judgement and responsible use: This unit focuses on evaluating AI-generated output to identify bias and hallucinations, while developing the skills required to use AI responsibly. It also provides guidance on evaluating AI tools from an ethical perspective in academic contexts.

Unit 3. Use: Prompting skills and use of tools: This unit explores frameworks and approaches to help you develop effective prompting skills. It also examines the type of tasks best suited to popular AI tools and their applications in academic and research contexts.

9 Extenuating circumstances

There may be difficult circumstances in your life that affect your ability to meet an assessment deadline or affect your performance in an assessment. These are known as Extenuating Circumstances or 'ECs'. Extenuating Circumstances are exceptional, seriously adverse and outside of your control.

As a student, it's your responsibility to let the University know about any extenuating circumstances that have affected your work at the time they occur. Where appropriate, you can request a deferral of assessment to the next assessment period, or your circumstances can be taken into account by the Assessment Board when making its progression/finalist decision. If you are requesting a deferral of an assessment, you should submit an application by the deadline for completion of the assessment. If you are unable to do this, evidence must be provided which demonstrates the reason for not being able to meet the deadline, in addition to the evidence for the claim.

Extenuating Circumstances can only be requested for summative assessment, not for formative assessment. For example, only for assessment that counts towards your overall module grade.

You **MUST** provide evidence/supporting statement with any request for extenuating circumstances to be considered (except in cases of self-certification*) for a deferral to the next assessment opportunity, or for Extenuating Circumstances to be noted at the Programme Assessment board.

Self-certification can only be used when an extenuating circumstance **has affected you for period of 7 days or less**, i.e. a short illness that occurs at the point of assessment submission. You can apply for the following outcomes due to your Extenuating Circumstances. Please note the outcome of any Extenuating Circumstances application may be different from what has been requested:

Deferral

Your circumstances have impacted on your ability to sit your exam or complete and/or submit your assessment. You are requesting an opportunity to sit the exam or submit the work at the next assessment opportunity

ECs noted for the board only

Your circumstances may have affected your performance on other assessments for one or more modules and, although you have sat the exam or submitted the assessments, you wish the Programme Assessment Board to be aware of this in case there is a borderline decision to be made regarding your progression/finalist decision.

Deferral & ECs noted for the Board

Your circumstances have impacted on your ability to sit your exam or complete and/or submit your assessment. You are requesting an opportunity to sit the exam or submit the work at the next assessment opportunity.

There could be progression (i.e. additional year(s) of study), financial (tuition fees and scholarships) and student visa implications as a result of deferring your assessment.

For more information on how to apply for Extenuating Circumstances, please check the Assessment tile in MyMDX or contact CampusCentral via AskMDX:

<https://askmdx.mdx.ac.ae>

10 Assessment

Formative assessment

Formative assessments do not directly contribute to the overall module mark but they do provide an important opportunity to receive feedback on your learning. They provide an opportunity to evaluate and reflect on your understanding of what you have learnt. They also help your tutors identify what further support and guidance can be given to improve your grade.

On this module you will receive continuous feedback on your project progress, and in

particular on blog and report content. Project progress as documented by the blog will also constitute an important information for later summative assessment.

Feedback on your project progress will be provided by first and second supervisor, by your module tutors, and by your classmates in formal and informal peer assessment.

Summative assessment

Summative assessment is the assessed work that determines the overall module grade. It is the way the University verifies that students have met the learning outcomes at the appropriate level.

As summative assessment, students will have to:

1. Keep their blog updated with the required content and project progress, including quality multimedia material.
2. Submit the project report according to guidelines.
3. Present their project orally to staff.
4. Demonstrate their final project outcome to supervisor and second marker.

Assessment components are summarised and detailed in Tab. 1.

Table 1: Submission list

	Item	Due	Weight %	Description
1	Project blog	07/26	40	Blog design and maintenance; multimedia and final video content and quality. Evidence of appropriate planning and time management.
2	Project Report	25/09/26	40	Writing clarity and correctness; organisation and formatting; referencing; figures and tables; synthesis / section balance; documentation of development process and design choices; scientific / technical quality.
3	Final presentation	10/26	20	Use of assigned time; covering of fundamental aspects; clarity of objectives and contributions; multimedia quality (e.g. slides, videos); delivery.

Feedback on your assignments

You will be provided with feedback on all assessment that is helpful and informative, consistent with aiding the learning and development process.

Feedback will normally be provided within 15 working days of the published assessment component submission date.

Overall module grade

Each component of assessment will be marked directly onto the 20-point scale based on the assessment criteria. To produce the overall module grade a weighted average percentage will be calculated using the midpoint percentage in the scale below and then converted to a 20-point grade.

Before you submit your work for final grading, please ensure that you have accurately referenced the work. It is your responsibility to ensure that the submission is complete according to guidelines, and files correctly formatted and saved, so that they can be appropriately opened and assessed by tutors.

Further information is available at:

<https://unihub.mdx.ac.uk/study/assessment/regulations>

11 Module overview and learning schedule

Week start	Topic	Assessment and feedback
01/06	Project allocation and general information	Project allocation
22/06	Assessment, planning, submissions, blog	Blog link
29/06	Goals, objectives, tasks, Gantt chart	Project objectives
06/07	Bibliographic research and related works	Project research
13/07	Report and project writing, templates	Report structure
20/07	Testing and experimentation	Experiment plan
27/07 to 11/09	Guest lectures	Progress review
14/09	Oral presentation guidelines	Presentation draft
14/09	Project submission review	Submission material
25/09	Project submission	

Assessment process

The following diagram provides an overview of the marking process for your module assessment. Details of the programme external examiner can be found in the programme handbook.

Further information on the role of external examiners can be found at

<http://unihub.mdx.ac.uk/your-study/ensuring-quality/external-examiners>

20-point scale	General scale	General scale (full ranges)	Midpoint percentage used for aggregation purposes only
1	80% - 100%	79.50% - 100%	90%
2	76% - 79%	75.50% - 79.49%	77.5%
3	73% - 75%	72.50% - 75.49%	74%
4	70% - 72%	69.50% - 72.49%	71%
5	67% - 69%	66.50% - 69.49%	68%
6	65% - 66%	64.50% - 66.49%	65.5%
7	62% - 64%	61.50% - 64.49%	63%
8	60% - 61%	59.50% - 61.49%	60.5%
9	57% - 59%	56.50% - 59.49%	58%
10	55% - 56%	54.50% - 56.49%	55.5%
11	52% - 54%	51.50% - 54.49%	53%
12	50% - 51%	49.50% - 51.49%	50.5%
13	47% - 49%	46.50% - 49.49%	48%
14	45% - 46%	44.50% - 46.49%	45.5%
15	42% - 44%	41.50% - 44.49%	43%
